

Energy & Sustainability Traded Service

... helping you save

Curriculum Enrichment activities from the Energy and sustainability team.

Energy and environment days, Rainforest days, Waste and worms, Japan activities.

Your schools carbon reduction officers are always available to support schools in running environmentally based activities and events in schools. The Energy and Environment days are all part of the total service that the school has already paid for.

“Power Down Pete” the energy saving super hero regularly flies into schools to deliver his planet saving message through assembly and workshops.

This year we are also running waste activities including the massively popular “Mini Wormeries”. This delivers elements of the science curriculum around living organisms and habitats.

This is all included within the fee you have already paid for the energy and sustainability total service.

At an additional cost of £199 per day half day we are now also offering.

- Japan days – children learn Japanese phrases, do Japanese dancing , dress in traditional costume and can even try sushi.
- Rainforest activities. Understand this vital eco system. Gain awareness of the key issues and develop the knowledge necessary to make forest friendly choices.

Should you wish to book any of these for your school please reply to this email. Please pass this email to the relevant member of staff or Eco schools co-ordinator To book the schools carbon reduction officers please contact
